

Zen Custom-Brand Uploads

Zen Foundation comes with three built-in brands (breeze, ginseng, and juice), as well as our recommended starting point: Chameleon. You can choose one to get started building your site. Or, you might want to check out our newest Zen addition, the first of our Lightning Series of one-click demo sites: [Zen Intranet](#).

Eventually, most organizations want to customize their site to match their corporate identity. Zen makes that easy with Zen's [Brand Designer](#), which gives amazing control and flexibility over the design of your Zen site. If you have a pre-built custom brand (it's a .zip file), follow these steps:

1. On the *Admin Console > Zen Foundation > Manage Brand Plug-ins* screen, click the **Choose File** button, select the brand file on your computer, and then click **Upload**
2. Your new brand will appear in the table, and you can click its **Make Default** button so it becomes the default brand for the site

Your graphic designer can create a custom Zen brand for your organization. Complete instructions are available in the [Zen Branding Guide](#).

TIP

Have your designer install a test copy of Confluence on their computer, and then use Zen's [Brand Development Mode](#) (pre-Zen 5.2) to cut brand development time down by about 90%.

Or if you just want a beautiful, turnkey Zen branded delivered to you fast, check out our [Zen Brand Package](#) design service.
