

Breadcrumbs

Crumb Styling

The top two fields determine **color** and **hover color** for your crumbs, and **font size** to set the size of your crumbs.

Use **position from top** and **margin** settings to position the crumbs on the page.

(**background** and **opacity** can be used when styling breadcrumbs on top of a patterned window background.)

Crumb Management

Include Site Landing Page

Check this to include your site landing page as your first breadcrumb. (If unchecked, the first breadcrumb that links to the site landing page will be suppressed.)

Max Crumbs Before Collapse

Use this setting to control the number limit of breadcrumbs that will be displayed on page load before collapsing (with ellipsis ...) occurs.

Want to turn off breadcrumbs?

See [Master Page Layout > Page Designer](#) for more information on toggling off breadcrumbs at the Master Page level.
