

Install, Update Zen Intranet

See our [demo video](#) or complete the following steps to install, update or uninstall Zen Intranet.

Requirement

Install [Zen Foundation version 5.2.7](#) or higher before installing Zen Intranet.

Configuration

Configuration of this plugin is handled via [Zen Lightning](#).

The following procedures relate to installing Zen Intranet from a .jar file.

1. Download the .jar file for **Zen Intranet** from the [Atlassian Marketplace](#).
2. Open the Confluence Administration Console.
3. Select **Manage Add-ons** from the left panel.
4. The **Manage Add-ons** panel opens.
5. Click the **Upload Add-on** link.
6. The **Upload Add-on** window opens.
7. Click the **Choose File** button.
8. An upload window opens.
9. Navigate to and select the .jar file.
10. From the **Upload Add-on** window, click the **Upload** button.
11. Wait for a confirmation window to appear.

The following procedures relate to installing Zen Intranet from Confluence's Universal Plugin Manager (UPM).

1. Open the Confluence Administration Console.
2. Select **Find New Add-ons** from the left panel.
3. The **Find New Add-ons** panel opens.
4. Search for **Zen Intranet**.
5. From the search results, click the **Install** button.
6. Wait for a confirmation window to appear.

If your Confluence site contains the same space key as any Zen Intranet space, the plugin will discontinue its install. You can see a message regarding this action from the **Manage Zen Lightning** area in Confluence's Administration Console.

To proceed with your Zen Intranet installation, remove any conflicting spaces. (We recommend exporting them to a safe location before removing.) Otherwise, add Zen Intranet to a fresh Confluence instance. Once installed, you do not need to upgrade Zen Intranet.

Brand Updates

You can upload new or edited brands via the **Zen Foundation: Manage Brand Plug-ins** feature in the Confluence Admin console. You can uninstall the Zen Intranet plugin via Confluence's Universal Plugin Manager (UPM). Other uninstall options exist via the Zen Lightning features. See the [Manage Zen Intranet Through Zen Lightning](#) section for additional information.
