

Migrating to a New Server

Complete the following procedures to migrate your brands, spaces and site settings from one server to another.

Original Server

1. From the [Administration Console](#), click the **Manage Brand Plug-ins** link located in the **Zen Foundation** section.
2. Locate a brand you want to migrate.
3. Click it's corresponding **Download Brand** link.
4. Repeat steps two and three for all other brands.

New Server

1. From the [Administration Console](#), click the **Manage Brand Plug-ins** link located in the **Zen Foundation** section.
2. Click the **Choose File** button at the top of the list.
3. Navigate to the location of the brand.
4. Select the brand.
5. From the **Manage Brand Plug-ins** page, click the **Upload** button at the top of the list.

Use the Atlassian Confluence procedures for [exporting](#) and [importing](#) XML versions of a space. Be sure to export and import your [utility \(site master\) space](#). Space-level Zen settings are also exported. You may need to wait on the Confluence indexer in order to see the imported content.

1. Open each Confluence site (original and new) in a web browser.
2. From the [Administration Console](#) in each, click the **Site Settings** link located in the **Zen Foundation** section.
3. Configure the settings in the new server to match those in the original.
